PERSONAL SUMMARY

During my career I've gained a decent amount of experience in software development. Starting as an enthusiastic software developer I've learned how to efficiently create software in various technologies and environments. Being passionate in what I did was always a priority for me and helped me to quickly learn the most important things related to software.

Finally I met Agile and started to study it. After becoming a Scrum Master I've become interested not only in Scrum and Kanban but all skills related to efficient software development in general. My experience has let me discover lots of good and bad practices when it comes to project management and teamwork. While being a manager I implemented my „agile mindset” to the way I lead the teams. I believe that building the company on the foundations of transparency and trust can definitively lead to efficient growth and omnipresent satisfaction.

WORK EXPERIENCE

2019
